Minnows
Goldfish

Hornpout (bullhead)
American eel

Physical Characteristics

Area - 4 acres

Maximum depth - 4 feet

Principal fisheries: none

Temperature:

Surface - 77°F

4 feet - 77°F

This is a small, shallow pond located in a suburban area just outside of downtown Portland. The pond exhibits thick cattail growth during the summer months and the characteristics of the pond limit its fishery potential to hornpout.

This pond has been plagued for years with sewage inputs from excess storm water discharges. A task force was setup in the mid 1990's to look into cleaning up the Capisic watershed.

Access can be obtained via the road shoulder of Capisic Street.

Surveyed - July, 1952

Revised - 1998
